1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions, which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 13-16, are drawn to a method of thermally joining junction surfaces of a contact substrate.

Group II, claim(s) 17-25, are drawn to a contacting device.

2. The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: The different inventions are the method as per claim 13 and the device as per claims 17 and 23. For the following reasons, these inventions are not so linked as to form a single general inventive concept (PCT Rule 13.1) Japan Patent No. 60-162,574 (which is listed on an Information Disclosure Statement that will be made of record in the next office action) discloses a method for thermally joining junction surfaces of a contact substrate (1) with junction surfaces of a carrier substrate, the substrate being arranged in such a position for joining that the junction surfaces face each other on either side of the junction plane and the contact substrate is heated to the joining temperature from its rear side opposite to the junction surfaces in order to achieve the junction temperature required in the junction plane, laser energy (20) being applied to the contact substrate in order to heat it. The subject matter of claim 13 differs in that an adhesive material deposit arranged in the junction plane between the substrates is displaced at the same time as the contact substrate is brought to the junction position and the junction surfaces of the substrates are thermally joined. Claims 17-25 do not contain this technical feature or a corresponding technical feature. Consequently there is no technical relationship between these two groups.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
